PROGRAM TRADING SERVICES

With decades of experience and leading edge technology, we offer customized best execution services, low commission rates and world-class client support.

Trading at the Industry Forefront

Abel Noser's program trading services coupled with our industry-leading trade analytics can provide the data-driven solutions you need to stay ahead of the pack.

Our depth of experience in managing custom solutions for our clients can make the difference between successful trade implementation or costly mistakes. Our integrated trade analytics platform provides end-to-end analysis benchmarked against the largest universe of peer trade data available, at no extra cost.

Whether you are using one or more of our proprietary algorithms, targeted market clarity is one of the keys to a successful execution, from start to finish.

You can also use Abel Noser to analyze past execution performance and customize your overall approach in order to increase trading efficiency.

Pre-Trade Strategy

Trade Compass, our state-of-the-art pre-trade analytics tool, acts as a blueprint for trading baskets or single stocks by estimating costs based upon past performance of similar trades, either by you, or your peers. This foreknowledge will help you choose the right algorithm strategy based on your end goals.

Real-Time Clarity

Trade Pulse, our real-time analytics tool, provides a simple interface allowing you to track the progress of your trade using critical measures that enable real-time adjustments to your implementation strategy.

Post-Trade Analysis

With over 150 built-in measures, Trade-Zoom, our post-trade TCA tool, allows you to analyze the data that interests you most. Quarterly, monthly, or next-day, the platform's alpha-profiling engine presents the details of your trades, along with drill-down analysis showing actionable patterns as compared against trillions in annual peer trade data.

Manager Testing

Using our database of historical trades, you can review detailed strategy comparisons. Each portfolio manager's performance can be measured using a 2-day prior, open, arrival price, closing price and 2-day post trade momentum calculation. This invaluable information can aid communication between traders and managers, clarify venue strategies, or better predict real costs and potential liabilities.

Custom Trade Analysis and Algorithm Development

Abel Noser can also develop custom algorithms that best suit your requirements, allowing you to minimize your implementation costs associated with completing a specialized trade. As your trading strategies evolve, so can our process, providing a truly bespoke solution to meet the needs of an ever-changing market structure.
